TableCheck, Japan — FrontEnd Developer

July 2019 - January 2021

- Implemented and refactored website components such as reservation features in order to update website to fit new design guidelines and standards
- Developed new TC components such as input field, select field, and buttons which have been added to components library at tablekit.tablecheck.com and is used across the entire TableCheck ecosystem
- Planned and designed a new survey feature for restaurants that increased the company's competitiveness in the global market by first designing new screens and the feature in Sketch and then implementing the new designed screens in React and Elixir on the backend

Technical Environment: React, Mobx, Elixir, Ruby on Rails, Sketch

Shapiro Design Lab, Ann Arbor, MI — Student Developer

October 2017 - May 2019

- Developed applications to help bridge the gap between the university library system and it's students in an agile team environment using a diverse technical stack
- Implemented an accessibility checklist using React and Redux for library audits allowing librarians to quickly verify if they passed, freeing up librarians time for other important work
- Built a interactive book use and rating web application using Ruby on Rails that allows students to find and rate books in the library
- Built a data analytics software using Python which has helped the library collect data about the most popular areas in the library for students

Technical Environment: React, Redux, Python, Ruby on Rails

Turiple, Seoul, South Korea — Web Development Intern

May 2018 - July 2018

- Used Photoshop to create and edit photos used in virtual reality software that increased visibility for hotels
- Created multiple prototypes for new website designs using InVision Studio

Technical Environment: Invision Studio, Photoshop
